ORDER

Sub.:- Laying of Service line within the premises
of the Industrial consumers.

A number of cases have been reported in which the industrial consumers had committed theft of electricity in a well planned manner by tapping underground cable laid upto the meter by way of inserting a contactor operated by a remote controlled switch. Such modus operandi of theft of electricity has also been adopted by the consumers in the past also.

In order to rule out the possibility of such theft, the matter was examined and it has been decided that the service line within the premises of the consumer upto meter should neither be allowed to be laid as overhead conductor line nor underground cable be allowed to be laid under compact solid flooring (Pakka Fursh). To curb the tendency of theft of electricity, it is enjoined upon all the concerned officers that henceforth laying of service line upto meter within the premises of the industrial consumers should be preferably through open to air cable. However, in case of underground cable the same should be laid either in open trench or in welded G.I. Pipe under the supervision of Jaipur Discom's Officer.
