Sub : Showing reading of old and new meter in the energy bills.

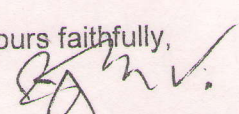

Dear sir,

It has been noticed that reading of old meter(s) in case of change of meter is/are not shown separately. Consumption thereof is added directly in the consumption of new meter. Such process confuses the consumers in ascertaining the consumption billed with respect of present and previous reading of meter.

It is also a matter of fact that existing bill format does not have sufficient space to show reading of old and new meter separately, where more than one meter have been installed at the premises of consumer.

Therefore, it is decided that where one meter is installed at the premises of consumer and meter change takes place then full detail of old as well as new meter like meter No., present reading, previous reading consumption etc. are to be invariably shown in the energy bills.

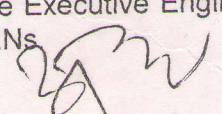

Yours faithfully,

  
(A.K. Jain)
