No.JdVVNL/SE(Comml)/JU/S.CI/2k2/

D.1654 dt. 05-09-2002

ORDER**Sub: Installation of transformer Sub Station required
For release of new connection(s) shifting of various
categories of connection.**

In accordance with the erstwhile Board's Orders No.904 dt.04-05-70, No.2315 dt.12-05-70 and No.385 dt.08-02-77, the provisions were existing for allowing shifting of connection (other than agriculture category), and entire cost of augmentation was to be recovered from the consumers. Doubts have been raised by various officers of different Wings as to whether the same orders are still applicable or not in case of shifting of various categories of connections, as these orders are quite old and thereafter much changes have been made in procedure of release of a new connection.

The matter was examined and felt that these circulars have lost their sanctity, with passage of time as drastic changes have been made in the policy for release of new connections with provisions of giving supply on 11KV or higher voltage for connected load above 50 KW/demand more than 50 KVA. But for consumers having connected load upto 50 KW/demand less than 50 KVA, the supply is giving on LT and as such the consumer is not required to install his own transformer sub-station. Moreover, the provisions have also been made for recovering transformer back-up charges from applicants (other than Domestic & Agriculture) for release of new connection as well as extension in connected load. It obviously means that till the connected load/contract demand does not exceed 50 KW/50 KVA respectively, the cost of transformer Sub-Station shall invariably be borne by the Discom.

In view of the above, it is hereby clarified that in case of release of new connection(s)/shifting of connection(s) under Domestic, Non domestic, Mixed load and Industrial categories if the connected load/contract demand is below 50 KW/50 KVA as the case may be, the new transformer sub station shall be installed (if required) at Discom's cost, but the cost of extension of line if any, shall be borne by the consumer(s). However, before sanctioning installation of a new transformer sub station, the sanctioning authority shall satisfy himself about the future load growth if initially the prospective consumer(s) is/are only one or two.
