ORDER

**Sub- Installation of GO switches and Horn Gap fuses
for connections of H.T. consumers.**

During recent meeting with Industrial Associations, it was represented that there are large number of interruptions on the industrial feeders due to non availability of GO switches and Horn Gap fuses for the H.T. consumers, resulting into heavy production losses and increase in wastage. The faults at consumers end are also reflected on the feeder effecting large number of consumers. Even for execution of new jobs and for attending individual complaints, too many shut downs are being taken resulting into long interruptions on various feeders of industrial area[s]

In order to resolve above difficulties, it has been decided that henceforth GO switches and horn gap fuses should invariably be provided at the point of tapping of supply for protection against cable provided for HT consumers. The GO switches and horn gap fuses for existing consumers wherever available should also be re commissioned to reduce interruptions on feeders. For prospective consumers, provision of providing GO switches and horn gap fuses should be made while framing estimates. It is mandatory for every HT consumer to provide HT protection after metering for protection of its transformer and installations, so that, consumers fault is not reflected on Nigam's system. Wherever, such protection is not existing, necessary notice be issued to the consumers for providing the same within a period of one month.
