

No.JdVVNL/MD/CE(HQ)/SE(RA&C)/JU/2017-18/D. 1213 Dt. 13.12.17

ORDER

Sub: Guidelines for maintaining uninterrupted power supply and taking shut-down of 33 KV/ 11 KV/ LT lines.

It is observed that shut down of various 33 KV/ 11 KV/ LT lines in industrial and urban areas are being taken by Field Officers without proper planning for preventive maintenance/ augmentation works. This affect the industrial production in industrial areas badly and also affect the daily routine/ working in urban area. Besides above the image of Discom is spoiled amongst consumers.

In order to stream line the process of taking shut-down, following guidelines are hereby issued.

1. Industrial areas: On Sunday- after intimating Industrial association and publishing in local newspapers.
2. Urban Areas: Tuesday and Friday- after publishing in local newspapers.

As far as possible, LT work if required may be carried out during shut down period of 33 KV/ 11 KV lines.

In order to carry out maintenance of only confined area, isolators be provided at adequate locations. This will enable the shut-down of the portion in which work is to be carried out and the consumers on remaining portion may not be affected.

All field officers are directed to follow the above instruction strictly.

By Order,

(U.S. Chouhan)
